Prerequisite: Student must have completed the 5th semester of course work as listed on the most current POS (Plan of Study) and completed at least 10 weeks (400 hours) of construction experience/internship prior to enrollment in this course. This experience must be in areas related to the mission of the CEMT program.

All CEMT students are required to obtain a minimum of 400 hours of construction experience (i.e., internship or equivalent) to graduate. This internship is a pre-requisite for CEMT 39000 which is a 1-credit hour course where student develop a professional technical report on what they did, lessons learned, how what they did related to courses taken, recommendations, etc. So the internship needs to involve more than just applying a skill such as pipe laying. It needs to involve things like supervision, administration, estimating, scheduling, etc. When you take 390, you will be required to obtain a letter from your employer documenting work experience. Prior to beginning the internship, you must register with the Office of Career Services and Professional Development. The contact is:

- Mrs. Jennifer Williams, Director
  Room: ET 101D.
  Phone: (317) 274 – 0805
